

CATS DOGS
DOSAGE - ALOE VERA.
ORAL GEL

Unlike normal drugs which are dose weight related, it is not so accurate with Aloe Vera Gel. There is no set amount. Each animal is individual.

If there is a "condition" start with a low level of between 5&10 mls oral Gel for the first 2 - 3 days and increase gradually over 10 days to 60 mls. This is for a 30kg dog. For smaller or larger dogs the dose can be decreased or increased proportionately.

Aloe is so safe that at these levels one cannot produce any problems.

For Maintenance use 15 mls oral Gel per day.
Starting with 5/10 mis increasing it to 15mis.

1 oz=30 mls

Oral Gel can be taken once or twice daily - preferably on an empty stomach.

If there is a skin condition, use both Gel and topical application.
Increase the amount over a period of 2 - 3 weeks.

Start with 2 drops oral Gel in food and gently increase.

Aloe Vera Gel is safe to use with traditional veterinary drugs
