**To whom it may concern**

I was diagnosed with Prostate Cancer just over 5 years ago and was treated initially with monthly injections of Prostatap. At the same time I was recommended to take various natural products, namely Bee Pollen: A-Beta-Care Soft Gels and Aloe Berry Nectar from Forever Living Products. When I was diagnosed my PSA count was 288 and obviously serious, and also an X-ray showed a shadow indicating the possibility that the cancer had spread to my pelvic bone.

I continued to have the injections (now changed to 3 monthly) and the Aloe products until gradually the PSA dropped to single figures until it reached 1.5. At that point I eased off the amount of Aloe Products that I took, and over a period of 18 months the PSA gradually crept up again. I was prescribed tablets to counteract this and whilst it halted the increase it did not diminish the PSA reading significantly. I also increased the amount of Aloe Products that I was taking, and together with a course of Radio Therapy it has brought down my PSA reading to zero, with also an X-ray reading, which now showed no signs of any cancer in my bones

I find the Aloe Products have helped throughout, not only to counteract my cancer, but also making me feel so much better for taking them. I have no hesitation in recommending Forever Livings' Aloe Products to anyone with this ailment.
