

Baby Joshua

“

I have to say, that the results were seen almost instantly!”

”

I have to admit, at first I had little faith in any of the aloe products as I am medically trained and I find it difficult to see anything outside the box.

But when my son was born on the 31 May 2010, he had the most beautiful skin and I was devastated when he developed what is known by health visitors as 'baby acne'. He began developing spots, blemishes, red patches and skin areas that looked angry and sore. I was so upset as I was taking Joshua to meet friends and relatives and his skin was awful. I told my father who suggested I use Aloe Propolis Creme as often as I thought was needed.

I applied the cream after washing Joshua's skin in the morning and night. I then started using it throughout the day. I have to say, that the results were seen almost instantly. His skin was smoother, the cream seemed to produce a protective film over his face and I was astonished.

After using the product three times a day for about 10 days, the results were amazing and I now use it daily. Joshua's skin is now picture perfect! I will be continuing to use the cream in the future in unison with the Aloe Vera Jelly for any sore areas Joshua or I have, as well as on my stretch marks.
