

Toothgel Testimonial

I had regular gum inflammation and bleeding whenever I cleaned my teeth, which was a result of a pre-existing illness I have. The bleeding at times could be quite heavy, not spotting that people get from time to time.

After switching to the Forever Bright Toothgel my gum inflammation reduced and has since calmed down completely and the bleeding has more or less stopped, with just the odd spot now and again. I also thought at the time that I was losing a filling that was breaking away when I brushed with the Toothgel, but on checking it was plaque not my filling that was falling away.

I put this down to using the toothgel and believe that my teeth and gums are in much better health now than they have been in years. I wouldn't ever change from the Forever Toothgel now; not only has it resolved my gum and bleeding problem but it's restoring my oral health and has a lovely taste and texture that makes it a nice product to use.
